Unified Network Management Platform

Infraon NMS is a fully integrated out of the box system that offers seamless multi-vendor network management capabilities

infraon NMS

Creating transformational impact with measurable outcomes

Infraon NMS (Network Management System) – Monitor multi-vendor network devices

It's unreliable to use multiple tools to track different components of your network to understand complete availability and improve performance. Unifying teams to blindly troubleshoot network issues at the right time can be impossible too.

Infraon NMS is a cloud-based network monitoring system that provides a comprehensive picture of your multi-vendor network architecture. You get on-demand scalability to add/replace providers - on-premises, cloud, or hybrid.

What sets us apart

Infraon NMS manages your network inventory from one location, making it easy to improve uptime. Ensure peak network health and lower outages with workflows to manage approval, schedule changes, etc.

- Talk about massive scale capability
- Talk about having incident management built in.

You also get a reporting and dashboard console to monitor performance insights like usage, traffic flow, user behavior, inventory, tickets, etc.

More Reasons to Use Infraon NMS

✓ Use network topology and discovery streamline port details, IP addresses, end-of-life dates, etc.

✓ Deploy microbots to automate diagnosis, identify anomalies, etc.

✓ Increase cross-team collaboration with workflow automation

✓ Change to something talking about multi vendor or multi technology

Key highlights

🕐 Identify incident sources on problems with automated real-time diagnosis

📄 Create Quality of Service reports

📊 Seamlessly forecast network inventory requirements

🗄 Leverage a customer portal to store network path details and validate SLAs

Maximize the ROI of multi-vendor network devices

Ace network performance management

Without integrated device and traffic monitoring capabilities, how can you take control of your network health? Proactively monitor and increase your network performance with powerful bots that automate critical workflows.

Track & resolve network faults

Your fault management process can be ineffective if you still manually fix network outages. Ensure high network availability with inbuilt incident capabilities with predefined resolution workflows.

Manage all IT & non-IT network devices

Long-drawn inventory management processes can weaken your network infrastructure ROI. Unify how you manage your multi-vendor IT & non-IT network inventory with enhanced auditing and budgeting features.

Integrated fault management

Getting to the root of fault occurrences is crucial to evaluating network health and vendor compliance. Start continuously tracking at-risk SLAs from a single robust location and accurately calculate penalties.

About Infraon Corp

Infraon Corp is a wholly-owned subsidiary of EverestIMS Technologies. Infraon provides an integrated SaaS-based product suite to help enterprises and telecom service providers automate their digital transformation journeys. With the Infraon platform, it becomes easy to scale modernization across simple or complex IT and network infrastructures.
