How Infraon's ITAM Solution Helped Emergya Wind Technologies (EWT) Improve Productivity and Compliance by 75%

Challenges

- Difficulty in monitoring and managing assets
- Potential service disruptions due to missed contract renewals and maintenance schedules
- Excessive manual work during audits, causing inefficiencies and errors

Why Infraon?

- Facilitates real-time tracking of IT assets while optimizing maintenance and resource allocation
- Provides insights into asset usage patterns, enhancing operational efficiency and reducing downtime
- Simplifies asset management by organizing assets based on location, type and function
- Ensures compliance with software licenses, mitigating risks associated with non-compliance
- Optimizes software spending by identifying unused licenses, potentially reducing costs
- Enhances security by controlling software installations, preventing unauthorized or malicious programs

Benefits

- Reduced manual efforts during auditing process
- Reduced risk of fines and under-licensing fees

About the client

Emergya Wind Technologies (EWT) is at the forefront of the global shift to lower carbon and more sustainable power generation. Since 2004, the company has provided the most cost-effective and reliable direct drive wind turbines for local energy generation.

With over 600 turbines installed across North America, Europe, and Asia, EWT offers a proven, certified, and high-performing range of turbines for decentralized wind energy, including solutions that integrate with other energy sources.

The need

EWT initially used spreadsheets for asset tracking, but found this method ineffective, leading to difficulties in locating and managing their assets. They are in need of robust tracking systems to manage AMCs and renewals accurately, aiming to prevent disruptions and ensure timely maintenance.

Additionally, the company is keen on automating auditing processes to reduce labor-intensive tasks and improve accuracy, thereby enhancing overall operational efficiency and compliance management.

Solution

After analyzing EWT's needs, Infraon came up with a   customized ITAM platform to meet their unique asset management needs.   Leveraging the robust inventory agent installation feature, the client   experienced a smooth deployment of asset tracking software while fetching   real-time data about all inventory items.

With the help of asset grouping / categorization, EWT got   the ability to organize assets based on location, type, or function.

Also, the software license management enabled the company   to stay remain compliant with licensing agreements, mitigating risks and   reducing costs associated with unused or unauthorized software installations

With Infraon ITAM's software blacklisting and whitelisting   feature, the client observed an enhancement in security measures by   controlling software installations, enforcing company policies, and   safeguarding against potential cybersecurity threats.

Results

50% - 75%
Increase in productivity

25% - 50%
Cost reduction on IT spend

50% - 75%
Improved compliance
