

**ENABLING DIGITAL TRANSFORMATION WITH
AI**

infraonOSS[®]
Powered by EverestIMS

BRIEF INTRODUCTION

The company is founded by a group of technocrats who have been working with each other for over 15 years and have a combined experience of close to 100+ yrs in the I&O scape. With a rich market experience in the I&O space, the company has built its widespread presence across the country through its product portfolio. EverestIMS envisages a future where Digital Transformation is a harbinger of enterprise change. The organization specializes in providing integrated IT solutions to empower corporations and enterprises to deliver enhanced services to their end-users.

DIGITAL TRANSFORMATION

We help our customers for digital transformation using our unified integrated INFRAON SUITE enabled with AI/ML

OSS SOLUTION

We provide complete OSS Solutions to Telecom using INFRAON products and by integrating with other EMS

IoT Solution

Infraon IoTMS is flexible framework has churned out a platform for monitoring and management of IOT devices.

OUR OFFERINGS - TELECOM

UNIFIED TELECOM OSS OFFERING

infraon UNMS

Integrates with multiple EMS / NMS for the unified management of multiple technologies like Transport, IP Core & Access Layers.

infraon Desk

AI driven Service Management system to take care of orders , map the life cycle of assets and trouble management.

KEY FEATURES

AI Based Core

Cross Domain Correlation

Resource M&O Support Readiness

Asset Life Cycle

Workforce Management

Resource Data Collection & Distribution

Resource Trouble Management

Fault and Performance Management

Resource Mediation & Reporting

Service Fulfilment & Assurance

Service Problem Management

Service Quality Management

KEY CUSTOMERS

Telecom

BFSI

Enterprise

MAJOR AWARDS AND CERTIFICATIONS

- 13 Process certifications by Pink Elephant (one of the top 10 ITSM systems in the world)
- Winner of India 500 Start-up Awards, 2019,
- Winner of International Trade Council Go Global Award 2019,
- Winner of Premium Usability and Rising Star awards- Finance Online 2019,
- Winner of Vibrant Start-up of The Year 2019 by Startupcity Magazine,
- ISO 20000-1:2018 , ISO 9001:2015, ISO 27001:2015, ISO/IEC 25010:2011.

Infraon OSS COMPONENTS eTOM PROCESS

infraon OSS – TMF STANDARDS

- Infraon OSS is built based on following standards:
 - TMF 814 MTNM
 - TMF OMG Notification Service
 - GB922 Information Data Model (SID)
 - ITU-T X.730 (Object Management Function)
 - ITU-T X.731 (State Management Function)
 - ITU-T X.732 (Attributes)
 - ITU-T X.733 (Alarm Reporting Function)
 - ITU-T X.734 (Event Management Function)

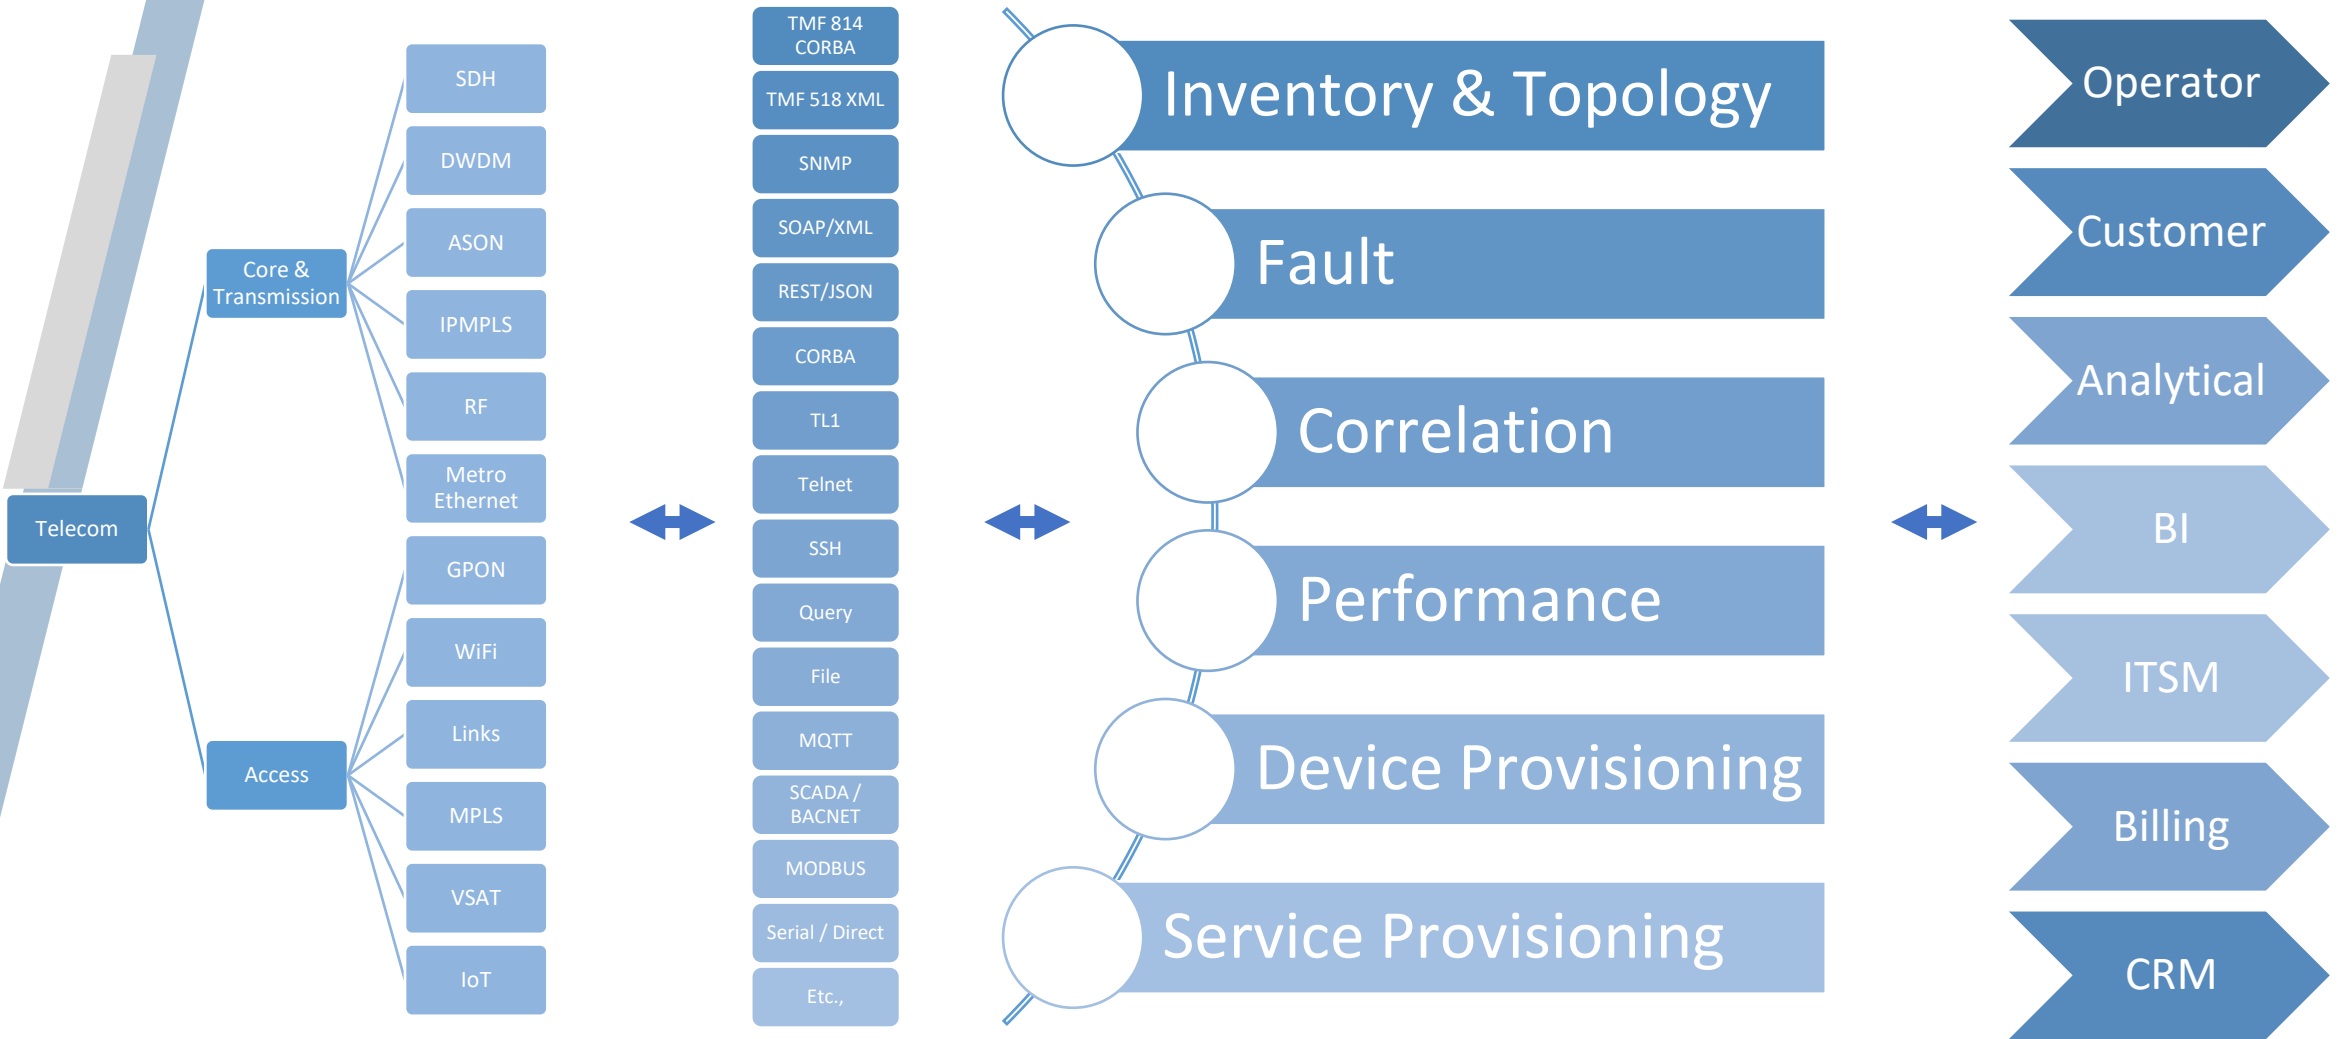

infraon Desk

PINK ELEPHANT CERTIFICATION

- 13 ITILv3 Processes
 - AM - Asset Management
 - AVM - Availability Management
 - CHG - Change Management
 - EM - Event Management
 - IM - Incident Management
 - PM - Problem Management
 - RF - Request Fulfillment
 - SACM - Software Asset and Change Management
 - SCM - Service Catalogue Management
 - SLM - Service Level Management
 - KB – Knowledge Base
 - RM - Release Management
 - Portfolio

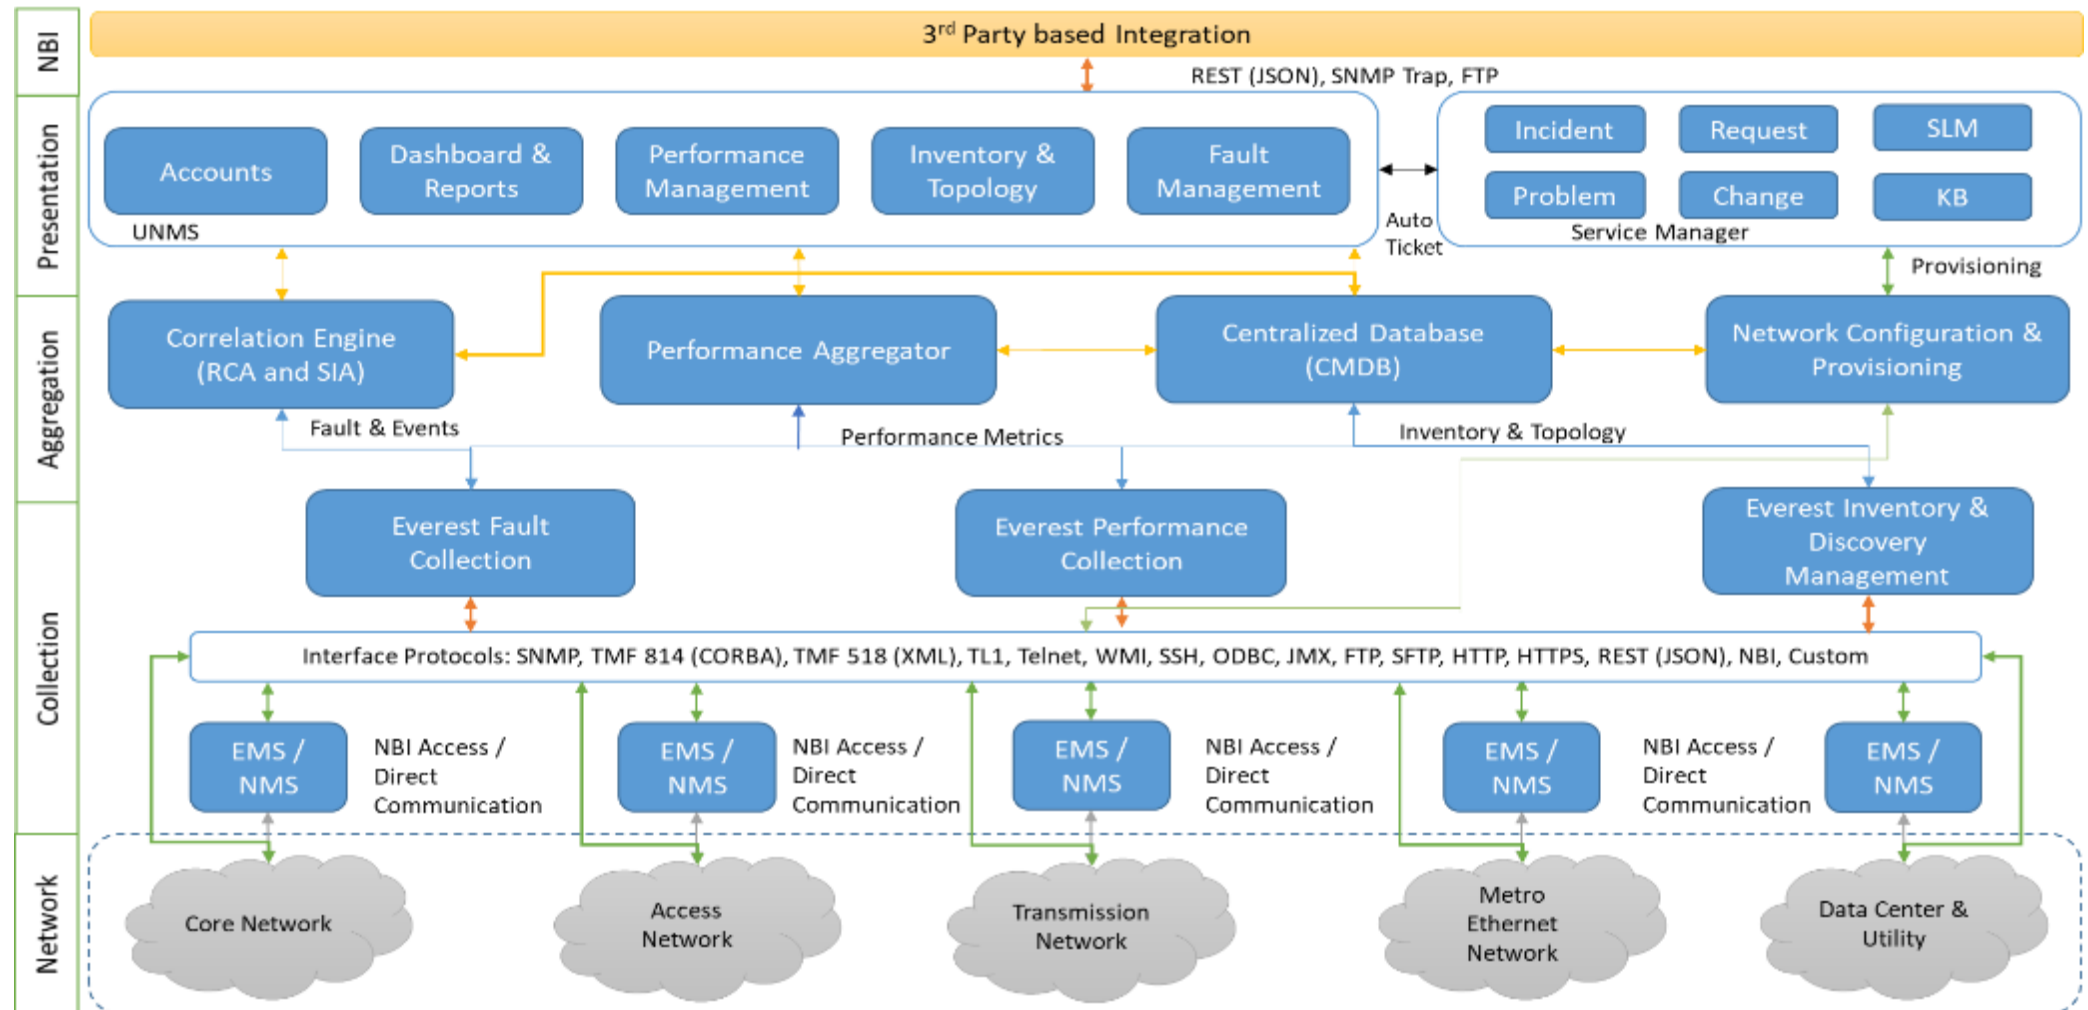

SOLUTION BASE

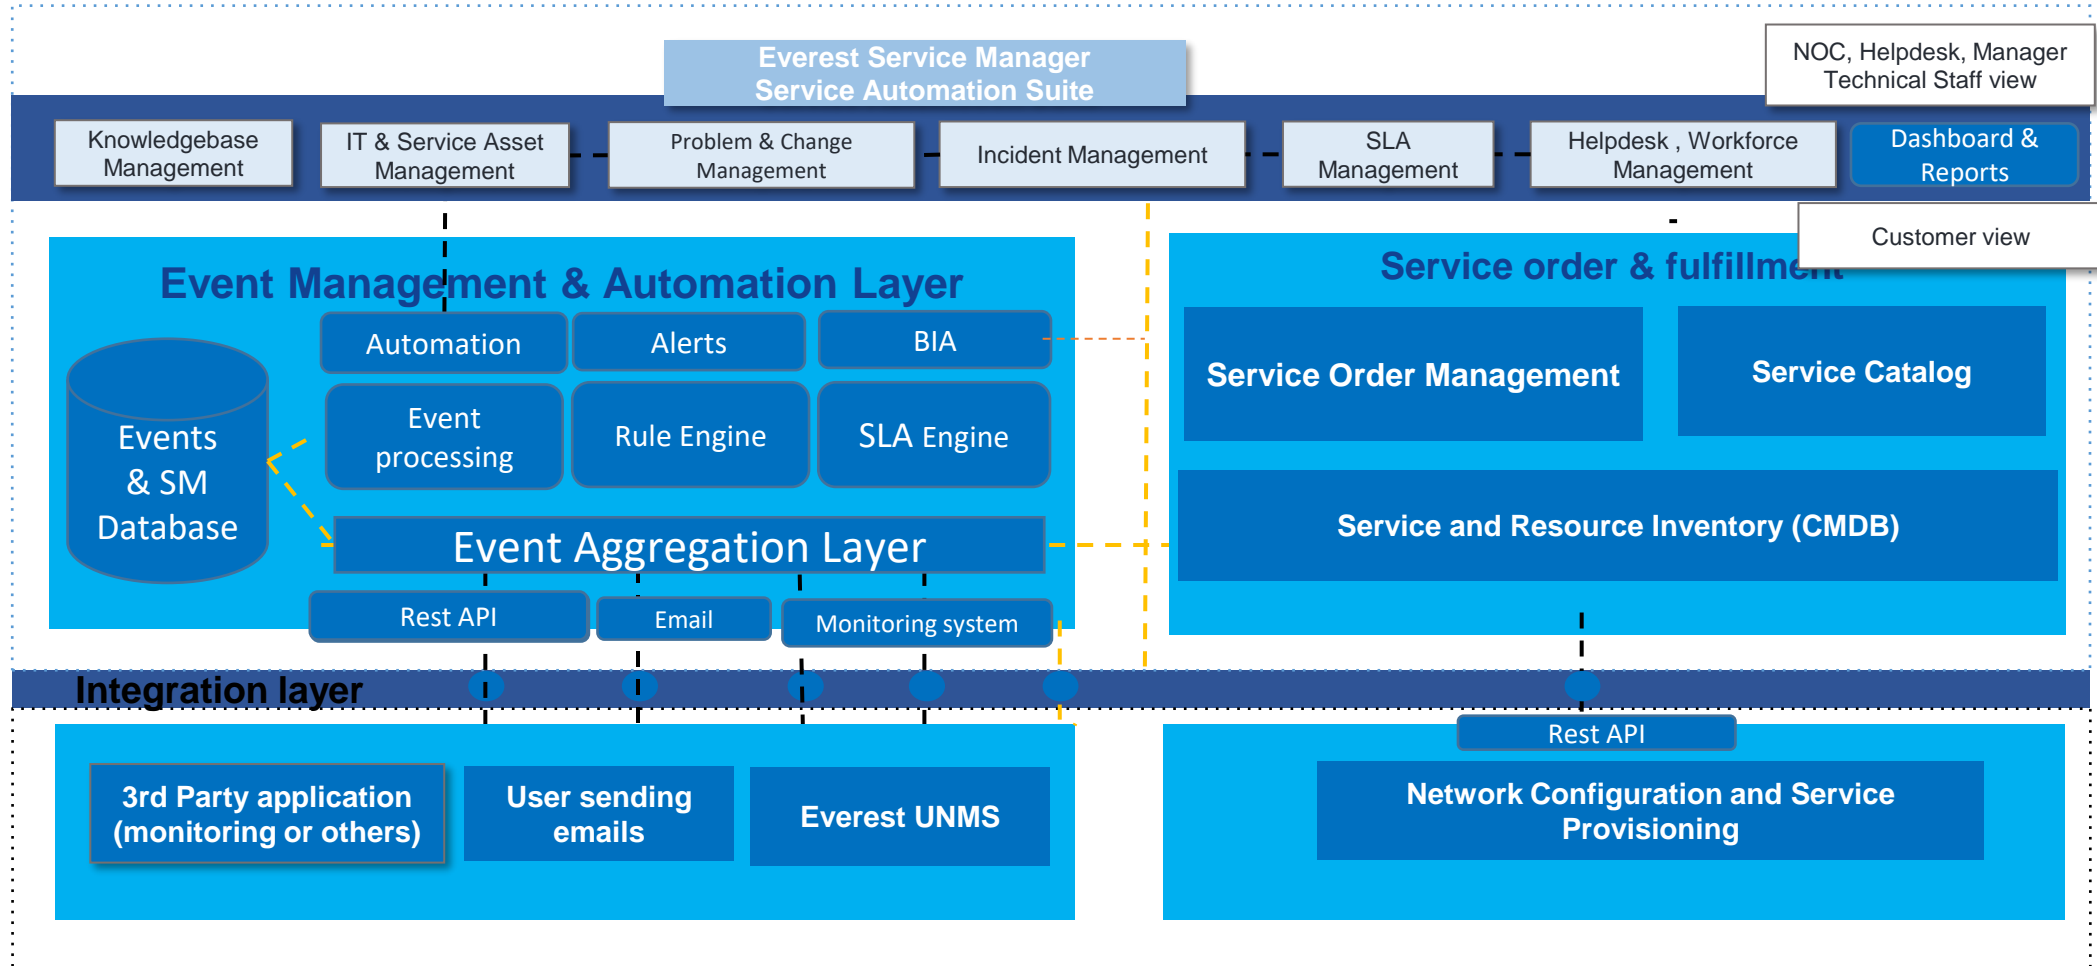

infraon OSS SOLUTION ARCHITECTURE

Infraon OSS Solution Architecture

infraon Desk SOLUTION ARCHITECTURE

KEY FEATURES

Unified Inventory

- Central CMDB
- Network Agnostic
- Domain Agnostic
- Complete Life Cycle Management
- Reconciliation

Unified Fault Management

- Real time Fault Detection
- Faults from across the domain
- Automated Incident
- Unified Dashboard Console

Unified Performance Management

- Data collection thru EMS / NMS & Direct communication
- Configurable collection frequency
- Combined View of all the domains

TCA & RCA

- Performance Threshold Breach Alarms
- Component Level Threshold tuning
- ML enabled Threshold Baseline

Cross Domain Correlation

- Detailed Root Cause Analysis
- Topological Relation based and Rule based Correlation
- Engine works across the domain and identify RCA

NE Configuration & Provisioning

- End to end provisioning from the beginning
- Periodic OS Image, Configuration Backup and Change alert

Service Provisioning

- Resource Reconciliation & Feasibility Check
- End to end Service Provisioning across the Domain Network Elements

Service Assurance

- Detailed CoS / QoS Monitoring
- Customer related Experience Monitoring and management
- SLA Management

Automation

- Flexible automation configuration for all the routine tasks
- Manual and Auto triggered the task based on Alert
- Ease the operation

Smart Analytics

- Reporting & Dashboards
- Forecast Prediction
- Customer Insights
- Capacity Planning
- Decision Making

CENTRALIZED FAULT MANAGEMENT

- Detection of the Problem – Using multiple intelligent techniques
- Isolate and Diagnose – Using in-built ways to diagnose and localize the problem
- Root Cause and Service Impact Analysis – Using various correlation algorithms, identifying the root cause of the events and the impacts and prioritize the problem based on impact
- Alert the administrator or respective NOC with root cause of the problem and the initial diagnostics
- Automatic correction of the potential problem causing conditions
- Resolve the problem and keep track of the actions taken
- Maintain the Knowledge Base of the problem and resolution provided.

FAULT MANAGEMENT

Alarm details as per TM Standard (ASAP)

- Event Type
- Managed Object Identifier
- Date & Time of Alarm
- Perceived Severity
- Probable Cause
- Specific Problem
- Notification Identifier or Correlated Notification Identifier
- Additional Text

Key Features in Fault Management.

- Alarm isolation.
- Trouble ticket generation & Life cycle management for Network & Service Problems for NMS & Helpdesk tool.
- Alarms Binning for different types of alarms (Resource alarms , service problems , fibre alarms , Threshold crossing alert -TCAs)

Fault Collection

- Push Method from NE directly (via SNMP Trap)
 - Real-time basis.
 - Triggered from device directly.
- Pull Method from NE directly via standard protocols such as SNMP
 - Periodic collect
- Collect via vendor provided EMS / NMS using API
 - Vendor specific API based.
 - Periodic collect
 - Option to re-synchronize.

PERFORMANCE MANAGEMENT

Covering various network technologies like IP/MPLS, SDH, DWDM, GPON, DCN, WiFi, RF, Utility, etc.,

Uses the SNMP, CORBA, XML to connect to NE directly

Uses EMS / NMS vendor provided API

Service Based SLA

SERVICE ORDER & REQUEST MANAGEMENT

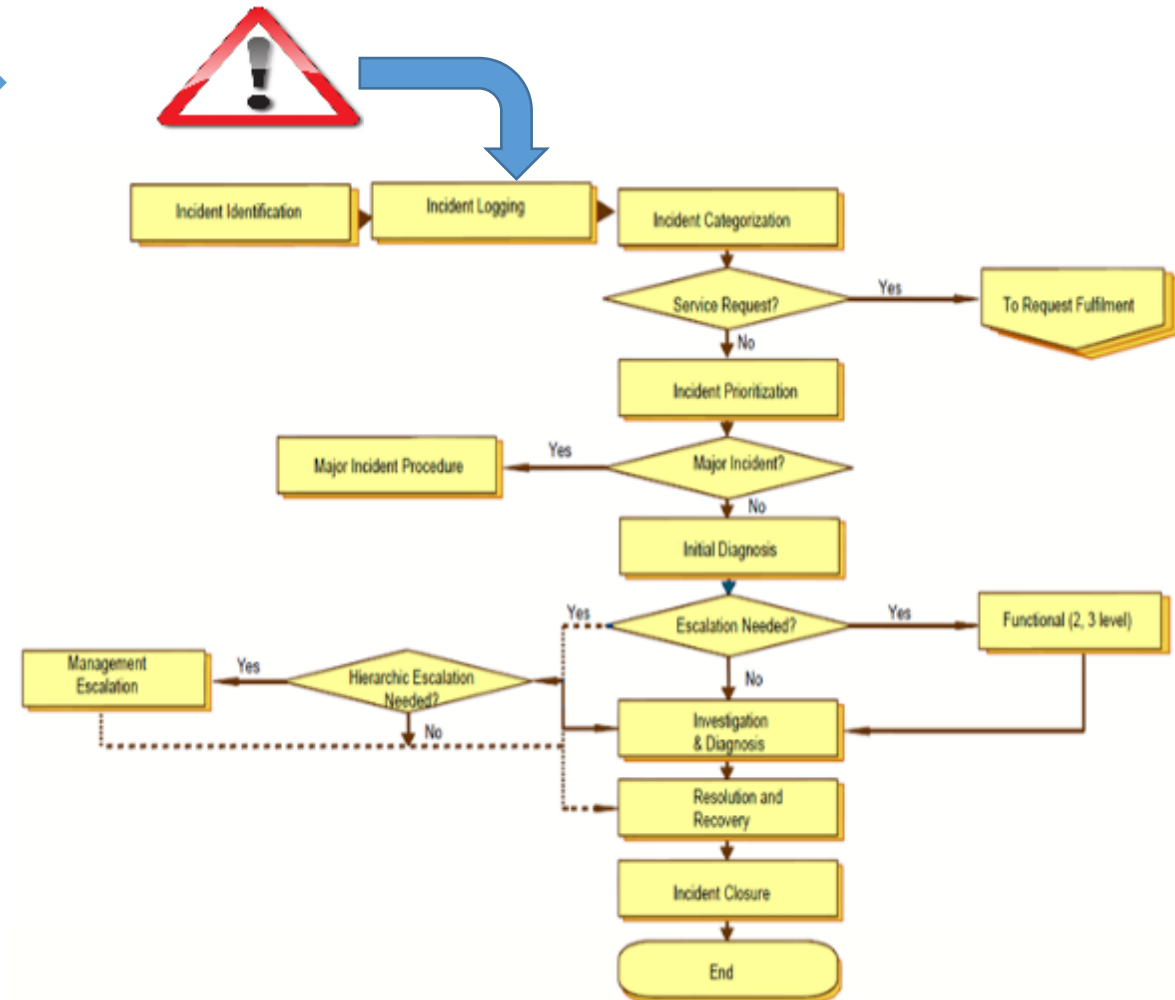

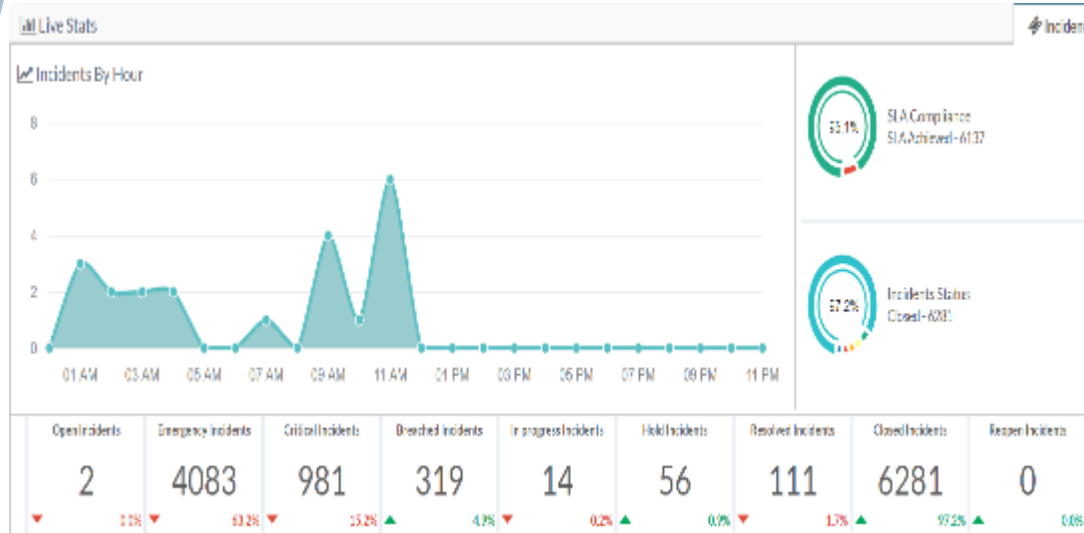

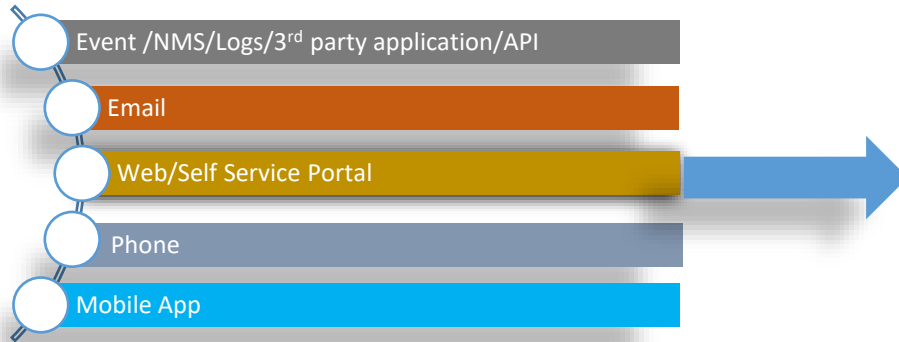

SERVICE MONITORING

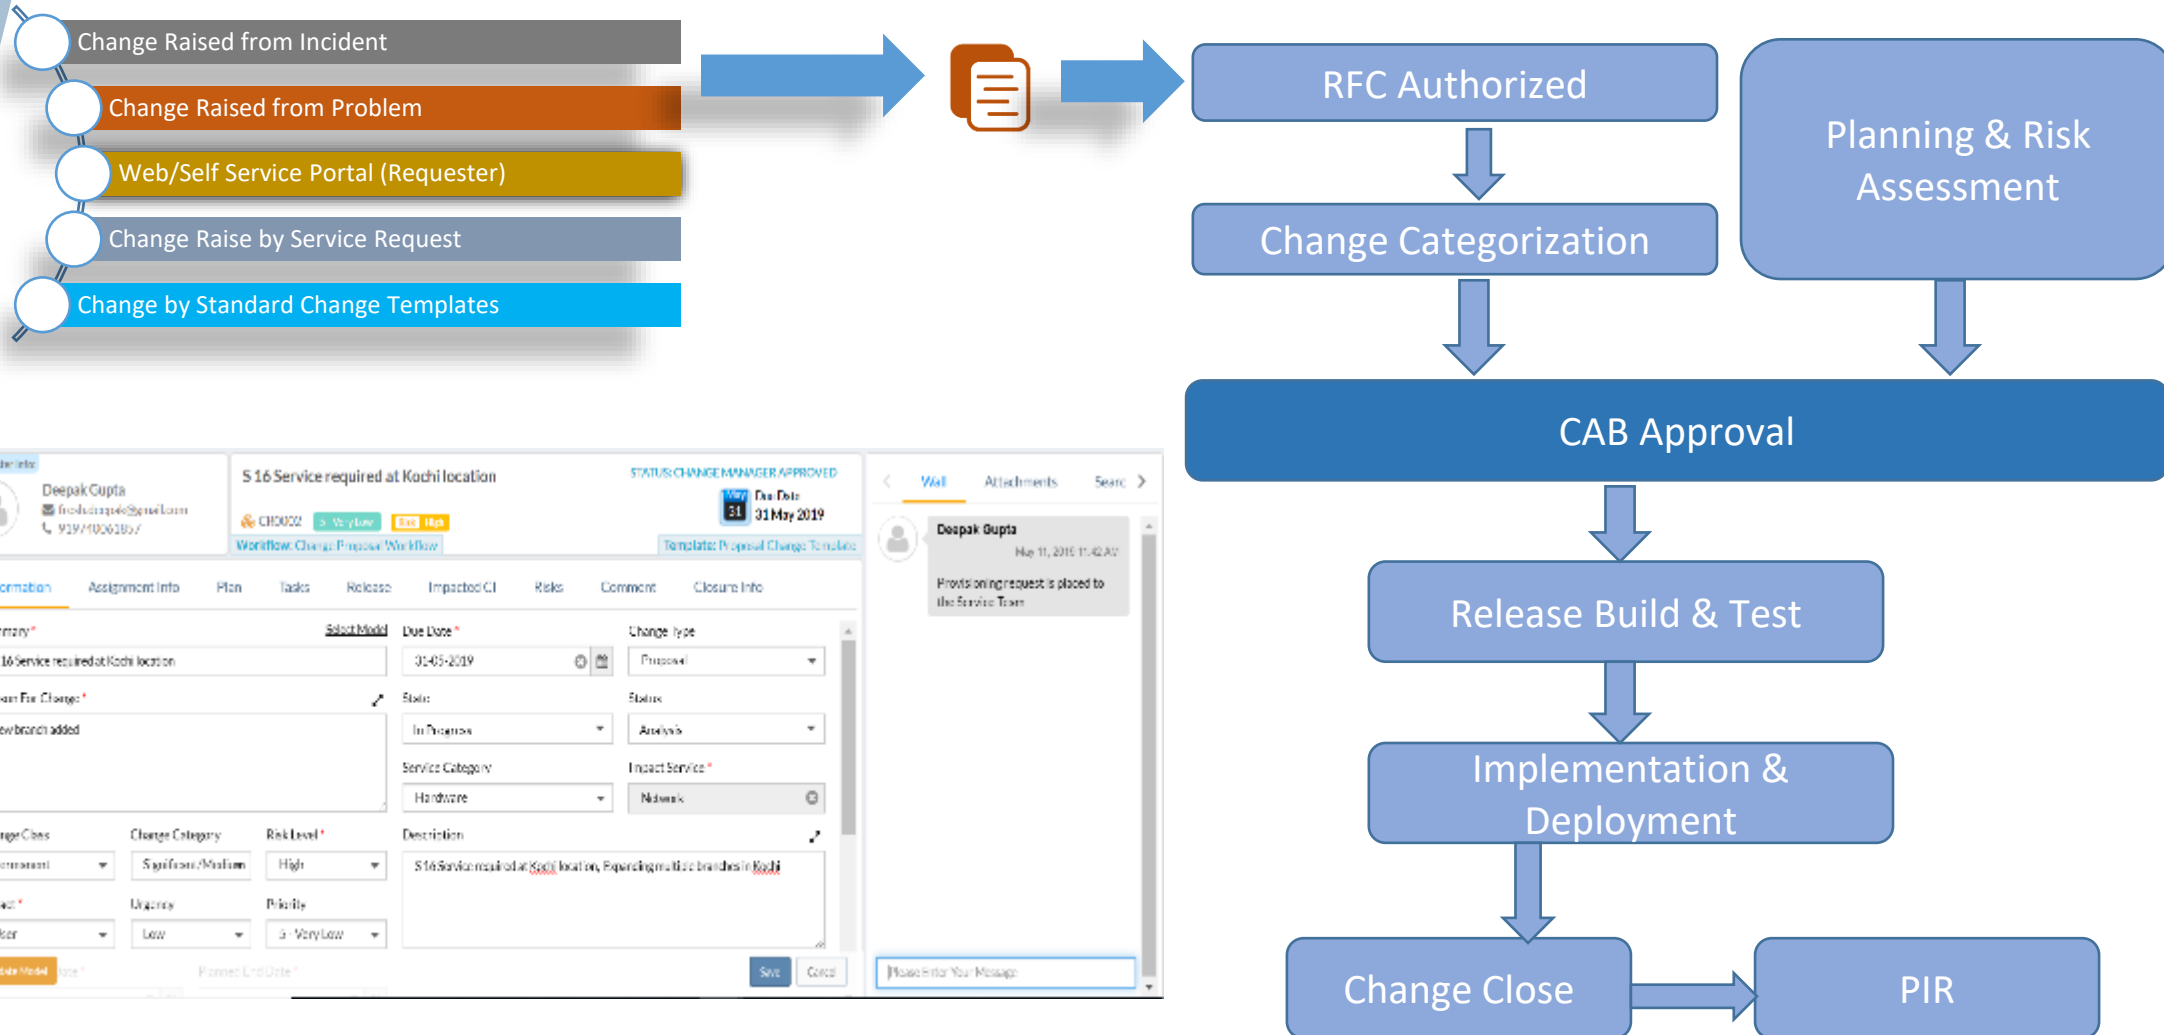

- System maps the network components and the circuits with customers and monitor the service level and the quality as per the services offered. Different technology services like,
 - Transport Services like SDH Circuits, DWDM Circuits
 - IP Core Services like VRF, Routing Services
 - L3 VPN Services
 - Ethernet Services
 - GPON Services
 - Etc.,
- Discover the circuits across vendors and technologies.

1 Profile 2 Business Hours 3 Applied For 4 Target Profile 5 OLA & UC 6 Escalation 7 History 8 Related Request 9 PSO

Profile Details

Description
This SLA is configured for service management.

Start Date 05-02-2019 **Expiry Date** 06-02-2020

Next Review Date 06-06-2019 **Notification Date** 06-06-2019

Scope
Before breaching the SLA, incident should get resolved.

SLA Version 1.1 **Compliance Target** 99
